The report compared the hospital records of 3,999 people aged between 65 and 85 who were admitted to the Hospital Universitario de Getafe between 2000 and 2007. The team found that people who had taken anti-hypertensive medication were more likely to have dementia than those who hadn’t. Blood pressure medication was not linked to Alzheimer’s disease but was linked to vascular dementia. The authors say the link between blood pressure medication and dementia is not known, but one possible explanation is that older people with dementia have problems with maintaining their blood pressure. “Thus, [people on blood pressure medication] might have an even greater risk of developing dementia,” Sanchez-Fernandez concludes. The findings are published in the January 2012 issue of the Journal of Hypertension.Q: Converting cURL command to Python with ssl In Python I want to convert this command line to a Python function that would use "urllib.request" with ssl or without? curl --cert cert.pem --key key.pem --cacert ca-cert.pem I've tried this but it's not working: import requests def getXML(): URL = "" response = requests. 2d92ce491b
