The fastest and more powerfull report tool there is, very easy to use and combine multiple datasources into one report A: I found that DevExpress offers a free version of the component FastReport (A: There is also FastReports. As a 7th Generation Android phone, the OnePlus 3 packs an insane amount of features and customization. Not only does it feature the latest processor, Mali-T830 GPU, but it also has the most powerful and capable camera available. The OnePlus 3 is an instant classic in terms of hardware, and by default, this phone offers an incredible experience. With the right development, however, you can take advantage of some more powerful and unique features that were previously reserved only for the most elite and expensive Android smartphones. Take Your OnePlus 3 to the Next Level XDA is fortunate enough to have a developer with the same name as me and we share the same interests. His name is F10rd, and he's an XDA member and has been developing for the OnePlus 3. In his latest Twitter feed, he's released an application called QuickSwitch, which is a great tool to add more features and power to your Android smartphone. One of the most important new features is the possibility to configure which apps will use your Snapdragon Battery Saver's Deep Sleep mode. With the OnePlus 3, the choice is only limited to native apps. The QuickSwitch application can now detect apps that call into the original battery saver so that you can easily switch which app will use the Deep Sleep mode. To do this, simply press and hold the side button to activate the QuickSwitch app. Then, navigate to Settings -> Battery -> Battery Saver -> App Selection. In the resulting screen, tap the switch next to the battery saver you want to configure. The default value is off (disabled) but you can check the QuickSwitch app as shown in the screenshot above. Now, the OnePlus 3 will automatically use that app's Deep Sleep mode. The other new feature in QuickSwitch is the ability to modify which apps have a unique background process. You can choose to disable this process altogether or modify the behavior by controlling the time it sleeps for or what it sleeps for. This can make a big difference in your
