AutoCAD LT includes support for the ActiveX Control framework, allowing Visual Basic, Visual C#, and Visual Basic for Applications (VBA) developers to create add-ons to AutoCAD

LT. A special IDE (Visual Studio) is used to create the add-ons, the code of which is then compiled to a DLL that functions as a shared object (.DLL) with the AutoCAD LT software itself. ActiveX add-ons provide most of the capabilities of macros, and can be used to automate all aspects of the drawing process. There are also 2 older but still supported, earlier methodologies for add-on development. One is the use of AutoCAD's native.NET libraries (available for Windows 2003, Windows Vista, Windows XP). The other is the use of C++. Both methods are available for AutoCAD LT as well. ObjectARX AutoCAD LT has a base class library known as ObjectARX, which is a special object-oriented C++ class library. Monoclonal antibodies against group B streptococcal M proteins: protective capacity in rats. Monoclonal antibodies (MAb) raised against group B streptococcal M protein reacted with the M protein of most of the contemporary group B streptococcal (GBS) serotypes, including strains isolated from children with invasive disease. Protection against GBS challenge was seen in a variety of animal models and strains, as well as human sera, after passive immunization with MAb. Antibodies to the M protein also cross-reacted with the M protein of the closely related M protein of strains of group C streptococci.(1) Field of the Invention This invention relates to a tape cassette.
